(이론 문제)
1. 3
2. 2
3. O
4.
(1) open("io_test.txt", "w", encoding="utf-8")
(2) fp.write
(3) fp.close
_
5. (1) and any (1) a state of the first last (1).
(1) open("io_test.txt", "r", encoding='utf-8')(2) fo readlines()
(2) fp.readlines()
6. 답 : pickle, json, marshal 모듈
7
7. (1) sqlite3.connect('test.db')
(2) conn.cursor()
(L) commedisor()
8.
(1) conn.cursor()
(2) c.executemany(sql, data)
9.
(1) conn.cursor()
(2) s in c.fetchall():

10. <mark>2</mark>
